

Technical Info

Fabstraps are customized fabricated strapping with wing seals attached using aluminum or stainless steel. The strapping is of specific lengths as required, and is supplied in ready to use units. They are used to secure field applied metal jacketing and/or insulation in place.

Fabstraps are manufactured in .020" thickness from type 300 Series Stainless Steel and from aluminum alloys conforming to ASTM B-209 designation.

Packaged to order and easily identifiable as to size, Fabstraps take the guesswork out of holding jacketing or insulation securely in place.

They eliminate overcut or undercut lengths, coil ends, seals being discarded, and field waste loss.

Material Available:	aluminum or stainless steel
Widths:	½" and ¾"
Thickness:	.020"
Colors:	silver or blue
Lengths:	custom cut
